

NANOPLASTIA BRASIL CACAU

P R O F E S S I O N A L

Maximum straightening

NANOPLASTIA STEP BY STEP INSTRUCTIONS

The Brasil Cacau Nanoplastia Treatment reinforces the internal structure and improves the condition of the hair - smooths the cuticle and eliminates frizz, greatly reduces styling time, instantly improves manageability while providing external protection. The end result is straighter, smoother, healthier, frizz-free hair with radiant shine. Ideal for all hair types. Results last up to six months.

1. Shake well before use. Apply Nanoplastia to clean dry hair.
2. Section the hair into 4 parts. Pour 60ml of Nanoplastia into a clean bowl, apply with a tint brush in sections. Fully saturate the hair, avoiding the scalp area. Emulsify through with fingers. Use a wide tooth comb in a downward

motion to eliminate any tangles.

Cover with a plastic cap or plastic wrap.

3. Process for 60 minutes. Rinse thoroughly and gently towel dry.
4. Blow dry hair with a round brush until 100% dry. Finish must be flat and smooth.
5. Divide the hair into 4 equal parts. Taking fine sections, pass iron evenly through the hair until a smooth, glossy look is achieved (refer to table).

After finishing use Brasil Cacau Shine Serum to finish for a fabulous result.

NB: Explain the importance of the Brasil Cacau home after care maintenance range. We recommend using Brasil Cacau Gradual Smooth Serum to refresh your Nanoplastia treatment.

HAIR TYPE	PASSES	TEMP
FINE-MEDIUM HAIR Previous Chemical History	6-15 Approx.	160°-230°
MEDIUM-COARSE HAIR Previous Chemical History	10-15 Approx.	180°-230°
COARSE WIRY & VIRGIN No Chemical History	10-15 Approx.	180°-230°

NB: Virgin hair requires extra passes as more resistant and no chemical damage to the cuticle.

NANOPLASTIA CONSULTATION

IMPORTANT INFORMATION FOR COLOURED, BLEACHED, HIGHLIGHTED OR GREY HAIR

On blonde / grey hair yellowing may occur. In some cases, hair may fade up to 4 levels. Perform strand test prior to use. Should you choose to use the Nanoplastia on Blonde or Grey hair, the following guidelines must be strictly followed.

- On clean & dry hair proceed with strand test. We recommend a discreet section of the hair.
- Apply Nanoplastia as per instructions.
- Preheat iron to 180 degrees. Select the strand and pass iron through as per instructions. After each pass examine hair for any unwanted tonal change eg: excessive gold tones. The iron should pass freely through the hair, giving off an acceptable amount of steam. If the iron does not glide freely, increase the temperature by 10 degree increments, still observing any tonal change.

- In all cases the iron should be creating steam, even on a low temperature; a silky shiny appearance should be visible. If this isn't the case, turn your iron up until it is sliding through the hair freely. This will help you determine the most accurate temperature for your client.

DO NOT USE WHILST PREGNANT OR BREAST FEEDING

Do not apply unnecessary high temperatures to delicate hair. By taking a strand test and following manufacturer's instructions, you will eliminate overheating this hair type.

Using the table as a guide determine the most appropriate heat required for your hair type/condition. Spending the time conducting a thorough consultation will enable you to achieve sensational results.
